

Please be advised that I disagree whole heartedly in regards to the NAB petition 04-160 to not allow satellite radio to offer traffic and weather. I pay for my satellite radio useage each and every month and I travel across the country so I can have instant access to the weather and traffic which so directly affects my day to day job of traveling. It might be a different situation if this was a free service but it's not. The people whom own a satellite radio pay for this out of their pockets to be able to have access to music, news, traffic and weather WHERE EVER THEY GO and not have to worry about tinkering with the radio to find a local station in whatever city they might be in and hoping to atleast be able to "catch the traffic and weather" conditions. I think this is just a ploy by the NAB to squash their upcoming competition. Please do not allow this to go through, you'll be hurting many people like myself whom travel the roads of this country day in and day! out.
